

Power BI Sales Dashboard

Developed By: Bushra Jahan

Role: Aspiring Data Analyst

Tools Used: Power BI, DAX, Data Visualization

Project Type: Sales Performance Analysis Dashboard

Power BI Sales Dashboard

PROJECT OVERVIEW

OBJECTIVE

The objective of this project was to analyse sales data and create an interactive dashboard that provides meaningful business insights. The dashboard helps users understand revenue trends, customer behaviour, product performance, and city-wise sales distribution through visual analytics. The project demonstrates data visualization, dashboard design, and business intelligence skills using Power BI.

DATASET DESCRIPTION

The dataset contains sales transaction records with the following fields:

Column Name	Description
Order_ID	Unique order identifier
Order_Date	Date of purchase
Product	Product sold
Category	Product category
Quantity	Quantity purchased
Price	Unit price
Customer	Customer name
City	Customer location

DATA PREPARATION

Before creating the dashboard, the dataset was cleaned and prepared.

Data Cleaning Activities

- Removed invalid records containing non-numeric values
- Corrected data types
- Converted Price and Quantity fields into numeric format
- Verified data consistency

Calculated Column

A new Revenue column was created using DAX:

Revenue = sales_data[Quantity] * sales_data[Price]

This column was used throughout the dashboard for revenue analysis.

DASHBOARD KPIS

The following Key Performance Indicators (KPIs) were created:

Total Revenue

Measures total sales revenue generated from all transactions.

Result: ₹167,250

Total Orders

Measures total number of sales transactions.

Result: 8

Total Customers

Measures distinct customers present in the dataset.

Result: 5

DASHBOARD VISUALIZATIONS

REVENUE BY PRODUCT

Purpose

To identify products generating the highest revenue.

Insight

Laptop generated the highest revenue, followed by Mobile sales.

REVENUE BY CITY

Purpose

To compare sales performance across different cities.

Insight

Mumbai generated the highest revenue among all cities.

MONTHLY REVENUE TREND

Purpose

To analyse revenue performance over time.

Insight

Revenue increased from January to February, indicating positive sales growth.

REVENUE BY CATEGORY

Purpose

To evaluate contribution of product categories to overall revenue.

Insight

Electronics contributed the majority of revenue, while Stationery represented a small share of total sales.

INTERACTIVE FILTERS (SLICERS)

The dashboard includes interactive slicers that allow users to dynamically filter data.

Available Filters

- City Filter
- Category Filter
- Product Filter

These filters update all dashboard visuals in real time, enabling flexible analysis of specific business segments.

City Filter

- ☐ Chennai
- ☐ Delhi
- ☐ Hyderabad
- ☐ Mumbai

Category Filter

Electronics

Stationary

Product Filter

- ☐ Book
- ☐ Laptop
- ☐ Mobile
- ☐ Mouse
- ☐ Pen

FINAL DASHBOARD

Figure 1: Interactive Sales Performance Dashboard developed using Power BI.

The dashboard provides an interactive view of sales performance through KPI cards, revenue trends, product analysis, city-wise sales distribution, category contribution, and dynamic slicers for filtering business data.

BUSINESS INSIGHTS

Based on dashboard analysis, the following insights were identified:

Revenue Performance

- Total Revenue generated: ₹167,250
- Electronics category dominates overall sales revenue

Product Analysis

- Laptop is the highest revenue-generating product
- Mobile products contribute significantly to total revenue

Customer Analysis

- Ravi is the highest-spending customer

Regional Analysis

- Mumbai generated the highest sales revenue
- Hyderabad and Delhi contributed significant revenue

Trend Analysis

- February sales exceeded January sales
- Revenue trend indicates business growth

CONCLUSION

The Power BI Sales Dashboard successfully transforms raw sales data into meaningful business insights through interactive visualizations and KPI reporting.

The dashboard enables quick decision-making by providing clear visibility into:

- Revenue performance
- Product contribution
- Customer spending behaviour
- Regional sales distribution
- Monthly sales trends

This project demonstrates practical skills in data preparation, DAX calculations, dashboard development, and business intelligence reporting using Power BI.

TECHNOLOGIES USED

- Power BI Desktop
- DAX
- Data Visualization
- Business Intelligence
- Data Analysis

FUTURE ENHANCEMENTS

Potential improvements for future versions include:

- Profit Analysis Dashboard
- Customer Segmentation Analysis
- Sales Forecasting
- Advanced DAX Measures
- Drill-through Reports
- Interactive Geographic Maps

Thank you for taking the time to review this project. This dashboard demonstrates my skills in data analysis, business intelligence, and data visualization using Power BI. I look forward to applying these skills in real-world business environments and continuously growing as a Data Analyst.
